NyAlternate names: heat shock protein 70
C;Species: nucleomorph Pyrenomonas salina
A;Note: a nucleomorph is the vestigial nucleus of a eukaryotic endosymbiont
C;Date: 13-Jan-1995 #sequence_revision 27-Jan-1995 #text_change 09-Jul-2004
C;Accession: 842488; 845576
R;Resing, S.; Hofmann, C.J.B.

dnaK-type molecular chaperone hsc70 - slime mold (Dictyostelium discoideum)
N;Alternate names: heat shock cognate protein 70
C;Species: Dictyostellum discoideum
C;Species: Dictyostellum discoideum
C;Accession: 837394
C;Accession: 837394
R;Haus, U; Trommler, P: Fisher, P.R.; Hartmann, H.; Lottspeich, F:; Noegel, A.A.; Schl
EMBO J. 12, 3763-3771, 1993
A;Title: The heat shock cognate protein from Dictyostelium affects actin polymerization
A;Reference number: 837394; MUID:94008983; PMID:8404847
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A;Residues: 1-640 <HAU>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Additional type molecular chaperone - mouse

Mark-type molecular chaperone - mouse

My Alternate names: heat shock protein 70-related protein

C; Species: Mus musculus (house mouse)

C; Date: 07-Jun-1990 #sequence_revision 07-Jun-1990 #text_change 09-Jul-2004

C; Accession: A34041

R; Marsumocto, M.; Fujimoto, H.

Bjochem. Bjophys. Res. Commun. 166, 43-49, 1990

A; Title: Cloning of a hsp70-related gene expressed in mouse spermatids.

A; Accession: A34041

A; Cross-references: UNIPROT:P16627; GB:M32218

C; Function:

A; Description: involved in protein folding and assembling/disassembling of protein comple; Superfamily: heat shock protein 70

C; Keywords: ATP; molecular chaperone

Anacytype molecular chaperone hapb - slime mold (Dictyostelium discoideum) (fragment)
NyAlternate names: 70k heat shock cognate protein aginactin; F-actin capping protein agi
C;Species Dictyostelium discoideum
C;Date: 19-May-1995 #sequence_revision 19-May-1995 #text_change 09-Jul-2004
C;Accession: A48872
K;Eddy, R.J.; Sauterer, R.A.; Condeelis, J.S.
J. Biol. Chem. 268, 23267-23274, 1993
A;Title: Aginactin, an agonist-regulated F-actin capping activity is associated with an A;Reference number: A48872; MUID:94043116; PMID:8226849
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A,Cross-references: UNIPROT:P36415; GB:L22736; NID:9433179; PIDN:AAA33219.1; PID:9433180 A,Note: authors translated the codon ACA for residue 10 as Pro, GCT for residue 60 as Va C;Function:

NiAlternate names: heat shock protein 70-related protein
C;Species: Plasmodium falciparum
C;Bate: 07-Jun-1990 #sequence_revision 07-Jun-1990 #text_change 09-Jul-2004
C;Accession: JU0164
R;Yang, Y. P.; An-ariya, P.; Sharma, Y.D.; Kilejian, A.
Mol. Bicchem. Parasitol. 26, 61-68, 1987
A;Title: The primary structure of a Plasmodium falciparum polypeptide related to heat sh A;Reference number: JU0164; MUID:88122267; PMID:2448622
A;Accession: JU0164
A;Molecule type: mRNA
A;References: UNIPROT:P11144; GB:M19753; NID:g309689; PIDN:AAA29626.1; PID:g309696
C;Function:
A;Description: involved in protein folding and assembling/disassembling of protein compl
C;Superfamily: heat shock protein 70
C;Keywords: ATP: molecular chaperone; tandem repeat
F;632-661/Region: 4-residue repeats

Proteins AAW54149-W54364 are examples of proteins produced in the endometrium during the hyperplasia, adenocarcinoma or proliferative phase of the endometrium. The presence and quantities of these proteins can be detected using 2D gel electrophoresis comparison of cell lysates. The proteins can be used as blochemical markers to detect the phase of the endometrium and can be measured in body fluids, obviating the need for endometrial biopsies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               623

The present invention describes a fused protein (1) prepared from a peptide containing a CTL (cytotoxic T lymphocyte) epitope recognised by cytotoxic T cells and a protein containing the Afrasae domain of a heat shock protein. Also described are: (1) a drug composition containing (1) as active ingredient; (2) a DNA encoding (1); (3) an expression vector containing the DNA of (2); and (4) a transformant which can retain the proteoxoacide activities, and can be used as cellular immune response inducer. The protein is useful as an active ingredient for drug compositions in preventing and/or treating infectious diseases such as malaria or cancer e.g. to provide systemic immunity against leukaemia. The present sequence represents a specifically claimed heat shock protein for use in a fused protein of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TNDKGRLSKERIERMVQEAEKYKAEDEVQRERVSAKNALESYAFNMKSAVEDEGLKGKIS 180

Pharmaceutical composition, used to treat or prevent infection or cancer, comprises a complex comprising a heat shock protein-binding fragment associated with a molecule displaying antigenicity of an infectious agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of human heat shock protein (HSP) Hsp71, an inducible form of a Hsp70 family protein. The invention relates to complexes of peptide-binding fragments of HSPs with antigenic molecules and their use in immunotherapy for the treatment of infectious diseases and cancer. Claimed methods of treating or preventing cancer/infectious disease involve culturing a cancer cell/infected cell transformed with a nucleic acid encoding a HSP peptide-binding domain, recovering complexes of the HSP fragments noncovalently associated with peptides from the cancer cell/infected cell, and administering the recovered complexes. These methods can use Hsp71 peptide-binding fragments comprising amino acids 391-615 and 400-440 of the present sequence, i.e. the peptide-binding core

                                                                                                                                        The invention describes a method of predicting, diagnosing or prognosing a cardiovascular disease by detection of a polymucleotide in a biological sample comprises hybridising at least one of the polymucleotide to a nucleic acid material of a biological sample, thus forming a hybridisation complex, and detecting the hybridisation complex. The polymucleotides, polypeptides, antisense molecule, antibody and reagent are useful for preparing compositions for preventing, predicting or diagnosing, or a medicament for treating a cardiovascular disease, e.g. arteriosclerosis, ischaemia, angina pectoris, or myocardial interction. This sequence represents a procein identified in the invention a being differentially expressed in individuals with cardiovascular disease

Human HSP70.1

```
subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene injury (but sequence presented is a human protein (described in Table 3 cof the specification) which is differentially expressed during pain.

Note: The sequence data for this patent did not form part of the printed for this injury in injury in the printed or specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal
                                                                                                                                                                                                                                                                                                                                                                                                                                        invention discloses a composition comprising two or more isolated rat
                                                                                                                                                                                                                                                                                                New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                              Costigan M;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                   and HSP70.3 are inducible members of the HSP70 family of proteins. The heat shock proteins of the invention are endogenously induced by heat artumour necrosis factor (TMP). This heat shock protein may be used in a composition which further comprises interferon-gamma, and/or a chemotherapeutic compound. The pharmaceutical composition is useful for the manufacture of a medicament for treating systemic tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     384 KSENVQDLLLLDVAPLSLGLETAGGVMTALIKRNSTIPTKQTQIFTTYSDNQPGVLIQVY

The invention relates to a composition comprising several CDNAs that are differentially expressed in a liver disorder. The composition is useful for treating liver disorder such as hyperlipidaemia, hypertension, type for treating liver disorder such as hyperlipidaemia, hypertension, type I diabetes, tumours of the liver and disorders of the inflammatory and immune response. The composition is useful for a high-throughput method cof screening several molecules or compounds to identify a ligand which specifically binds a CDNA. A protein encoded by the CDNA is useful for high-throughput method for using a protein to screen several molecules or compounds to identify at least one ligand which specifically binds the protein which involves combining the protein encoded by the CDNA with compounds to identify at least one ligand which specific compound, therefore identifying a ligand which specific binding between the protein and a molecule or compound, therefore identifying a ligand which specifically binds the protein. The composition is useful for detecting and compound, therefore identifying a ligand which specifically conditions to binds the protein. The composition is useful for detecting and compound, therefore identifying a ligand which specifically conditifying differential gene expression, can be used in gene therapy, to formulate prognosis and to design a treatment regimen and to monitor the efficacy of treatment. The present sequence represents the amino acid in the protein encoded by a CDNA differentially expressed in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                BADKKKVLDKCQEVISWLDANTLAEKDEFEHKRKELEQVCNPIISGLYQGAGGPGGFG 240

The present invention relates to PRO proteins and their coding sequences. The PRO proteins are useful for diagnosing and treating a B cell related disorder, e.g. X-linked infantile hypogammaglobulinemia, polygaccharide antiquen unresponsiveness, selective IgA deficiency, selective deficiency of IgG subclasses, immunodeficiency with hyper IgM, transient hypogammaglobulinemia of infancy, Burkitt's lymphoma, intermediate lymphoma, follicular lymphoma, type II hypersensitivity, rheumatcid arthritis, autoimmune mediated haemolytic anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or medicament for treating a condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromsome and conting sequences are useful as hybridization probes in chromsome and animals or knockout animals, which in turn are useful in the development animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       443

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and polypeptides; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, and methodies, and compositions are useful for diagnosing or treating an electric acids, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer,

                                                                                                                                                                                                                                             503
         sequence of constitutive heat shock protein Hsc70 by at least one amino acid, and capable of inducing cytotoxic T lymphocytes that specifically recognize cells naturally producing inducible Hsp70, in vitro or in vivo. The peptides are stable, and has high affinity for human leukocyte antigen (HLA) class I molecules. The present sequence represents Hsp 70.
                                                                                                                                                                                            443

                                                                                                                                                                                                                                    9
therapy. An oligomucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polymucleotide or as a probe for detecting the polymucleotide. The polymucleotides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polymucleotides are useful as pharmaceutical agents. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel heat shock protein fragment (HSP) that

can increase the level of one or more cytokines and/or one or more CC chemokines and/or nitric oxide produced by a cell, above that caused by the corresponding full length heat shock protein. The protein fragment of the invention has antimicrobial, virucide, and cytostatic activity. The protein fragment is useful in therapy, in treatment or prophylaxis of a disease and in the manufacture of a medicament for treatment or prophylaxis of a disease such as microbial infection, viral infection, disease of the immune system or cancer. The fragment is also useful as an adjuvant in vaccines, preferably, anti-HIV vaccines. The present sequence represents the human HSP70 protein
                                                                                                                                                                                                                                                                                                      443

and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular coganisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate environment. The information received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors or disperceins, along with the cDNA sequences encoding them. The novel proteins of the invention may have cytostactic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be tumour in a mammal. In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Š
                                                                                                                                                                                                                                                                                             The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide equences at least 80% identical to the TAT nucleic acids and polypeptide equences at least 80% identical to the TAT nucleic acids and polypeptide equences at least 80% identical to the TAT nucleic acids and nethods specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT nucleic acids, antibodies, antagonists, binding molecules and compositions for the treatment or diagnosing or treating a cell proliferative disorder associated with articularly cancers such as breast cancer, colorectal cancer, lung cancer, call proliferation ab breast cancer, colorectal cancer, ung cancer, cancers so the central cancer, ung cancer, cancers so the central unserdiated as hybridisation probes, in chromosome and gene mapping, in used as hybridisation and in gene therapy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Abnormal transcription of intracellular HSP70mRNA under acute and chronic continuous load of stress in a human being and its application.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           357
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents the human heat shock protein SHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14q22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EADKKKVLDKCQEVISWLDANTLAEKDEFEHKRKELEQVCNPIISGLYQGAGGPGFG

                                                                                                                                                                                                                                                                                                                         This sequence represents the human heat shock protein SHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14q22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

peptide containing a CTL (cytocair T lymphocyte) epitope recognised by cytocoxic T cells and a protein containing the ATPase domain of a heat shock protein. Also described are: (1) a drug composition containing (1) as active ingredient; (2) a DNA encoding (1); (3) an expression vector containing the DNA of (2); and (4) a transformant which can retain the expression vector of (3); (1) has cytostatic, immunostimulant and protozoacide activities, and can be used as a cellular immune response inducer. The protein is useful as an active ingredient for drug malaria or cancer e.g. to provide systemic immunity against leukaemia. The present sequence represents a specifically claimed heat shock protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 121 TNDKGRLSKEEIERMVQEAEKYKAEDEVQRERVSAKNALESYAFNMKSAVEDEGLKGKIS 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 KSENVODLLLLDVAPLSLGLETAGGVMTALIKRNSTIPTKQTQIFTTYSDNQPGVLIQVY

The present invention describes a predictor set comprising a plurality of polymucleotides or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity or members of the protein tyrosine kinase activity or members of the protein tyrosine kinaselection and the activity of cells, comprising obtaining a sample of cells, coteralining whether the cells express a plurality of markers, and correlating the expression of the markers to the compound's ability to modulate the activity of the cells; (2) a plurality of cell lines for identifying polymucleotides and polypeptides whose expression levels correlate with compound sensitivity or resistance of cells associated with a disease state, comprising subjecting the plurality of a slociated with a disease state, comprising subjecting the plurality of a microarray of polymucleotides or polypeptides, and selecting cell lines to one or more compounds, analysing the expression pattern of a microarray of polymucleotides for polypeptides that predict the sensitivity or resistance of cells associated with a disease state by using the expression pattern of the microarray. The polymucleotides and construction and the microarray. The polymucleotides and construction are alsease state by using the expression pattern of the microarray. The polymucleotides and convention are not an event and a sease that a predict the sensitivity or resistance of cells associated with a disease state by using the expression pattern of the microarray. The polymucleotides and polymucleotides and convention are not an event and a penetherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The polymucleotides and polypeptides are useful in predicting the activity of compounds that interact with protein tyrosine kinases and/or protein tyrosine kinase and/or sensitivity in patients to allow the development of individualized genetic profiles which aid in treating diseases and disorders (e.g. cancer) based on patient response at a molecular level. The present sequence is used in the exemplification of the present invention.
                                                                                                                                           predictor set; protein tyrosine kinase activity modulator;
protein tyrosine kinase pathway; protein tyrosine kinase; cytostatic;
gene therapy; drug sensitivity; genetic profile; cancer; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polynucleotides and polypeptides for predicting the activity of compounds that interact with protein tyrosine kinases and/or protein tyrosine kinase pathways.
                                                                                              Human src biomarker polypeptide SEQ ID NO:326.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 10; SEQ ID NO 326; 139pp; English

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human titochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), mycolonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, antiathritic, osteopathic, ophthalmological and Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating Claim 1; SEQ ID NO 255; 180pp; English. The protein fragment of the invention has antimicrobial, virucide, and cytostatic activity. The protein fragment is useful in therapy, in treatment or prophylaxis of a disease and in the manufacture of a medicament for treatment or

Primers and probes based on the HSP70 cDNA coding sequence can be used to detect the abnormal transcription of intracellular HSP70 mRNA in human acute and chronic sustained stress load
prophylaxis of a disease such as microbial infection, viral infection, disease of the immune system or cancer. The fragment is also useful as an adjuvant in vaccines, preferably, anti-HIV vaccines. The present sequence represents the bovine HSP70 procein
                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                  443
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180

Human heat shock proteins are located on chromosomes 6p21.3-22 and 14q22-34. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome

According to the legend of Fig 2, the H. sapiens HSP sequence has 641 amino acid residues, the sequence itself has only 640, including "O" (?) at position 640. Fig. 2 provides an alignment of heat shock proteins from a variety of organisms: 1. M. Myopneumoniae (Mnyhsp70 - AAR03922); 2. Bacillus megaterium (Bmehsp70 - AAR03923); 3. E. coli (dnaK - AAR03924); 4. T. cruzi (tc70kd - AAR03925); 5. T. cruzi (AAR03926); 6. Rat rattus (rathsp70 - AAR03929); 7. Xenopus laevis (X170 - AAR03928); 8. Homo sapiens (humhsp70 - AAR03929); 9. Gallus gallus (chkhsp70 - AAR03930); 10. Zea mays (machsp70 - AAR03931); 11. Serratia marcescens (smahsp70 - AAR03932). The proteins having homology to hsp's of T. cruzi can be used in vaccines and diagnosis involving e.g. Trypanosoma, Mycoplasma and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Proteins homologous to heat shock proteins of Trypanosoma cruzi - used in vaccines and diagnosis for species of e.g. muco-plasma or mycobacteria.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents the human heat shock protein LHSP70 amino acid agequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14922-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome

The invention relates to a novel heat shock protein fragment (HSP) that can increase the level of one or more cytokines and/or one or more CC chemokines and/or nitric oxide produced by a cell, above that caused by the corresponding full length heat shock protein. The protein fragment of the invention has antimicrobial, virucide, and cytostatic activity. The protein fragment is usefull in therapy, in treatment or prophylaxis of a disease and in the manufacture of a medicament for treatment or prophylaxis of the immune system or cancer. The fragment is also useful as an adjuvant in vaccines, preferably, anti-HIV vaccines. The present sequence represents the rat HSP70 protein
                                                             120

Also claimed are a vector comprising the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in neuronal issue of a first animal embersed to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a

compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the method for identifying a compound so mall molecule that regulates the cativity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating modulates its activity is useful for preparing a medicament for treating injury (CCI) and spared nerve injury (GMI) in an animal (e.g. gene the appearance presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The invention discloses a composition comprising two or more isolated rate or human polymucleotides or a polymucleotide which represents a fragment, or human polymucleotides or a polymucleotide acid sequence. Also claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound to a method for identifying a compound useful in treating activity in an animal of one or more of the polypeptides given in the contraction of a pecification, a method for identifying a compound useful in treating activity in an animal of one or more of the polypeptides given in the contraction of a pecification, a method for identifying a compound useful in treating activity in an animal of one or more of the polypeptides given in the contraction of the polyment of the polypeptides of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the polyment of the po
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                         New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ftp.wipo.int/pub/published_pct_sequences.

derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide. Also claimed are a vector comprising the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a which is differentially regulated in an animal subjected to pain and a set that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polympeptides given in the specification, a method for identifying a compound useful in treating a specification, a method for identifying a compound useful in treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene the specification) witch is differentially expressed during pain. Note: The sequence data for this patentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            443
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        121 TNDKGRLSKEEIERMVQEAEKYKAEDEVQRERVSAKNALESYAFNMKSAVEDEGLKGKIS 180

Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a xray, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polyneticetides, a method for producing a pharmaceutical composition, a method for identifying a compound that regulates the activity in an animal of one or more of the polypeptides given in the activity in an animal of one or more of the polypeptides given in the paperilication, a method for identifying a compound that regulates the activity is useful for preparing a medicament for treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymucleotide or the compound that medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal for Table 3 therapy). The sequence presented is a rat protein (described in Table 3)

disorder in a subject. The method is useful for treating angiogenesis-
mediated disorder, e.g., retinal or choroidal neovascularisation or
diseases associated with chronic inflammation, myocardial ischaemia,
stroke, coronary artery disease or peripheral vascular disease. The
present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TNDKGRLSKERIERMVQEAEKYKAEDEVQRERVSAKNALESYAFNMKSAVEDEGLKGKIS

                                                                                                                                                                                                            9
The invention relates to a method of treating an angiogenesis-mediated disorder in a subject. The method is useful for treating angiogenesis-mediated disorder, e.g., retinal or choroidal neovascularisation or diseases associated with chronic inflammation, myocardial ischemia, stroke, coronary artery disease or peripheral vascular disease. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                        384 KSENVQDLLLLDVAPLSLGLETAGGVMTALIKRNSTIPTKOTQTFTTYSDNQPGVLIQVY
